

Cloud Security Vulnerability Scan Report

Demo AWS Server

Author: Pamela Okoloba

Date: July 21, 2025

Tools Used

- Termux - for Linux environment on Android
- Nmap - scanned open ports
- Nikto - scanned for web vulnerabilities
- Canva - formatted this report

Target

Demo AWS-hosted web server (no real credentials used)

Findings

- Open Port 80 - No HTTPS detected
- PHP Version Disclosure - Server gives away tech stack
- Missing Security Headers - No Content-Security-Policy, X-Frame-Options, etc.

Conclusion

This scan helped me understand:

- How to assess basic server vulnerabilities
- Why encryption and headers matter for web app security

Next step: I'll scan my own AWS server and continue my learning journey!
